

**INTRODUCING A NEW MINDSET FOR
HIGH PRODUCTIVITY EQUIPMENT**

XMOR

XMOR

HIGH PRODUCTIVITY EQUIPMENT

XMOR is a revolution in earthmoving attachment design.

The unique high strength steel formula delivers the lightest, hardest working products available in the mining and earth moving industry. Offering increased volumes and reduced weight, they can handle larger payloads than their counterparts; increasing the productivity of your asset and reducing your cost per tonne whilst extending asset life.

**EXPECT MORE
IN LESS TIME**

XMOR DUMP BODIES EXTRACT MORE

When you need to transport a lot of abrasive material quickly and safely then XMOR dump bodies are the answer. Here's why:

Tailored dump bodies - Customised XMOR dump bodies available to suit all material densities, loading methods and wear scenarios for truck models 90t+ payload. Offering the lightest body and hence the highest payload in its class.

Patented Payload Centering Design & Improved Tyre Wear - Patented design and "cone" construction ensures load is centred and the centre of gravity remains at the optimal axle split regardless of the material density. Proven to reduce tyre temperatures / increase tyre life whilst offering improved vehicle dynamics and stability.

Anti-carry-back - Unique design features such as curved front wall proven to drastically reduce or eliminate hang-up and carry back.

Lighter, Stronger, Harder Wearing - The unique high strength construction of XMOR bodies from HARDOX 500 Tuf steel - and a range of advanced HARDOX steels, delivers exceptional wear life, structural and impact properties at a much lower weight than conventional bodies. No need for liners - further reducing weight, cost of ownership and downtime.

LIGHTWEIGHT BODIES ARE NOT NEW.

But XMOR has gone lighter.

And beyond this additional payload XMOR offers significant additional advantages to reduce your cost per tonne, improve safety and enhance productivity on site.

Expect more from XMOR.

EXPECT MORE

XMOR buckets and dump bodies can be fitted to virtually any conventional truck or excavator, which means you can swap out existing buckets and bodies and start saving immediately.

Isn't it time you expected more from your bucket and dump bodies?

Change your mindset about earthmoving attachments, go XMOR.

First class dumping performance - Floor and tail shape, as well as flared sidewalls result in load shedding that reduces contact pressure on floor, whilst also ensuring no choking as the material exits the tray. This enables the material to clear the windrow at the dump - avoiding tail dragging and dozer cleanup.

Flexible Sidewalls - Designed to resist contact with loading resistance.

Easy to install and service - Thanks to improved body hoist pin and pivot pin installation and easy to replace mud guards and chain rock deflectors. No wear liner package to manage and repair.

Australian Made - Certified Australian Made product designed and manufactured by G&G Mining.
